Skills

- 7+ years of machine learning experiences, knowledgeable in state-of-the-art algorithms and capable of developing new ones for specific application
- 9+ years of programming experiences on Python, C, C++ on Linux, Unix, Windows system
- Experienced in the Python package development as well as its interface with C for faster implementation, capable of modifying existing packages or developing a new one

Education

University of California, San Diego (UCSD)
Ph.D. in Computer Science and Engineering 09.2018 – Present (expected Summer 2022)
M.S. in Computer Science and Engineering (transferred to Ph.D.) 09.2017 – 09.2018

National Taiwan University (NTU)
B.S. in Computer Science and Information Engineering 09.2012 – 06.2016

Research Interest

My research focuses on topics in trustworthy machine learning, including adversarial examples, interpretability, out-of-distribution data, and distribution robustness. Grounded on both theoretical and empirical work, my research offers insights into how machine learning models work and how they can be applied to design trustworthy algorithms in practical domains, such as safety and security.

Keywords: trustworthy machine learning, adversarial examples, out-of-distribution

Major Experiences

Graduate Student Researcher UCSD, CA (Advisor: Kamalika Chaudhuri) 09.2017 - Present
- Studied the effect of adversarial robust training algorithms on out-of-distribution data; discovered that robust neural networks tend to generalize better on some natural manifold
- Identified that the trade-off between adversarial robustness and accuracy is not an intrinsic property for many datasets, but instead, is caused by the increase in the generalization gap when applying robust training
- Designed adversarial attack/defense algorithms that work well across many non-parametric classifiers including decision trees, k-nearest neighbors, and random forest; the implementation of the algorithm is accelerated with customized C-extension
- Implemented a machine learning approach for Python error localization

Machine Learning Intern (`PyTorch` team) Facebook, Remote 06.2021 - 09.2021
- Contributed $30+$ commits and $6000+$ lines of code in `torchaudio`
- Implemented a text-to-speech pipeline including text-preprocessing with phonemes, spectrogram generation with Tacotron2, and time-domain conversion with WaveRNN with `PyTorch`
- Benchmarked and compared the performance of multiple operations and models with other related works

Ph.D. Intern (video intelligence team) Yahoo, NY 06.2018 - 09.2018
- Designed the pipeline to insert ads realistically into a video
- Developed an algorithm to identify good places in a video to insert ads, and adopted Mask R-CNN for the segmentation of the foreground and background to perform the insertion

Research Assistant NTU, Taipei, Taiwan (Advisor: Hsuan-Tien Lin) 09.2013 - 06.2016
- Developed a novel multi-label classification (MLC) algorithm that utilizes the memory structure within recurrent neural networks to extract the hidden correlation between labels (with `keras` and `tensorflow`)
- Proposed the first cost-sensitive error-correcting-code, and adopted it for solving MLC and active learning problems

- Led the development of the open-source package (with $600+$ stars), `libact`, which provides a unified interface for active learning algorithms in Python; setup the infrastructures including continuous integration, documentation generation, and PyPI installation; contributed $350+$ commits and $25,000+$ lines of code

Person Identification with EEG NTU, Taipei, Taiwan (Advisor: Tsung-Ren Huang) 02.2014 - 06.2016

- Designed and carried out $50+$ sessions of Electroencephalography (EEG) experiments; studied the characteristic of EEG including neural oscillations and artifacts that contaminates the data
- Conducted twin study to understand the properties of using EEG as biometrics, such as how the personality and value of a person correlate with the identification rate

Gesture recognition through electromyography (EMG) NTU, Taipei, Taiwan 04.2014 - 06.2014

- Built a device that measures muscle signal and sends the signal to a laptop
- Applied support vector machine for the recognition of $4+$ hand gestures

Intern IKV-Tech, Taipei, Taiwan 07.2013 - 08.2013

- Implemented FAT32 file system component through UCB protocol for Windows and embedded device (ARM922t Mcu); designed C APIs for encrypted file storage between PC and the embedded device

Cryptanalysis on Mifare Crypto-1 NTU, Taipei, Taiwan (Advisor: Chen-Mou Cheng) 02.2013 - 07.2013

- Designed and analyzed cryptanalytic time-memory trade-off (rainbow table) on the Crypto-1 encryption
- Implemented Crypto-1 rainbow table generation with OpenCL and optimized it on NVIDIA GPU, which results in 10 times faster implementation

Selected Talks

A Closer Look at Accuracy vs. Robustness 06.2020-10.2021
- INFORMS annual meeting, Anaheim, CA
- SoCal ML Symposium, Virtual
- G-Research, Virtual
- NeurIPS 2020, Virtual
- ICML UDL 2020, Virtual

In- and Out-of-Distribution Generalization Properties of Adversarially Robust Models 08.2021
- Science of Deep Learning, Facebook AI Research, Virtual

Close Category Generalization for Out-of-Distribution Classification 03.2021
- SoCal ML Symposium, Virtual

Robustness for Non-Parametric Classification: A Generic Attack and Defense 08.2020
- AISTATS 2020, Virtual

Deep Learning with a Rethinking Structure for Multi-label Classification 11.2019
- ACML, Nagoya, Japan

Cost-Sensitive Reference Pair Encoding for Multi-Label Learning 06.2018
- PAKDD, Melbourne, Australia

Near-uniform Aggregation of Gradient Boosting Machines for KDD Cup 2015 08.2015
- KDD, Sydney, Australia

Awards

Fourth Place (out of 800+ teams), Predicting MOOC dropouts (ACM KDD Cup) 08.2015
- with NTU team, ACM KDD
- Led the team in the ensemble of 70+ models, and contributed to feature generation and model tuning

First Place, Big data analytics for semiconductor manufacturing 02.2015
- with P.-H. Chu and Y.-A. Chung, Taiwan Semiconductor Manufacturing Company
- Proposed a solution for detecting failures in semiconductor manufacturing process using ridge regression
